

FRESCOLORI® earth

Delivery and servicing surfaces exclusively by trained FRESCOLORI processing specialists, with a long-term guarantee of high quality.

Fine Caramor limestone marble finds here its liveliness - larger raised smoothly plastered surfaces contrast uneven deep surfaces. Like a hidden treasure, the delicately shimmering little golden highlights appear.

FRESCOLORI® earth

Material: 2 CM1G layers
Consumption: CM1G about 1.2 kg/m² each layer
Colour: freely selectable
Application: Indoor

Surfaces are prepared and primed.

- Application of the first layer of the Caramor limestone-marble plaster, in grain thickness 1, with added mica in full surface contact
- Observe the waiting times, with a rest period until the first layer is dry.
- Application of the second layer of the Caramor limestone-marble plaster, in grain thickness 1, in full surface contact
- Pulling the material upwards (suction effect)
- Scratching the surface with mica
- Execute a double smoothing of the surface in the drying phase, with the trowel, without water
- Respect the waiting times with a rest period until the next day
- Polishing (grain size 1000)
